

SAPUTRA BUDIMAN

Data Science Enthusiast | Data Collection, Validation & Labeling

085729945113 | saputrabudiman77@gmail.com | Sumbawa Besar, NTB, Indonesia | linkedin.com/in/saputrabudiman | github.com/Put3r4

PROFESSIONAL SUMMARY

Informatics student at Sumbawa University of Technology currently completing an intensive Data Scientist scholarship program (Coding Camp powered by DBS Foundation x Dicoding). Hands-on experience collecting, cleaning, and validating datasets from multiple institutional sources using Python and Pandas, including a national-scale food price monitoring project integrating hundreds of thousands of historical data rows. Comfortable working under labeling and quality guidelines, documenting processes for reproducibility, and collaborating with cross-functional teams.

TECHNICAL SKILLS

Programming: Python (OOP, unit testing, PEP 8), SQL, JavaScript (ES6), HTML5/CSS3

Data Collection & Validation: Multi-source data collection, data cleaning & wrangling, data quality validation, outlier labeling (IQR method), missing-value handling, documentation for reproducibility

Data Processing & Libraries: Pandas, NumPy, Scikit-Learn, ETL Pipeline, REST API integration

Machine Learning: Supervised & unsupervised learning, classification, regression, clustering, feature engineering, hyperparameter tuning

Data Visualization: Matplotlib, Seaborn, Streamlit, Google Sheets

Database: SQL window functions, CTEs, complex joins, Google BigQuery

Tools: Git/GitHub (branching, pull requests, code review), Jupyter Notebook, Google Colab, VS Code

RELEVANT EXPERIENCE

Data Scientist, Intensive Scholarship Program | Coding Camp by DBS Foundation 2026

Feb 2026 - Jul 2026

- Completing an intensive data science training program with 5+ hours of daily technical study, covering Python programming from fundamentals to advanced topics (data types, OOP, automated testing)
- Built, trained, and evaluated machine learning models for e-commerce sales analysis, achieving over 80% accuracy
- Applied SQL for data extraction, manipulation, and querying to support analytical modeling workflows

IT Development & Insight Staff | HMIT - Sumbawa University of Technology

2024 - 2025

- IT Bootcamp Lead: led a district-level IT competition for high school students, directly mentoring 12 students from programming fundamentals through web deployment and hosting (Laravel)
- PWTI Class Tutor: facilitated weekly technical classes for fellow students, designing and delivering curriculum on programming fundamentals, Python, and the Laravel framework

SELECTED PROJECT

Pantau Pasar - National Food Price Data Pipeline & Feature Engineering

Data Scientist | Coding Camp powered by DBS Foundation x Dicoding

- Collected and integrated historical price data for 21 strategic food commodities from two institutional sources (PIHPS Nasional and SP2KP Kemendag, Jan 2022 - Apr 2026), across 5 Excel files and 1 CSV file, producing a clean dataset of 23,709 rows at national level and 456,590 rows across 514 districts/cities
- Performed data cleaning and validation: resolved header noise, corrected data types, restructured wide-to-long format, handled missing values via per-commodity interpolation, and labeled outliers using the IQR method to maintain dataset quality
- Conducted exploratory data analysis and correlation testing across 2022-2026, identifying correlations above 0.95 among commodity variants and recommending consolidation of 21 commodities into 6 strategic groups for modeling efficiency
- Designed and implemented exogenous feature engineering, including calendar features (public holidays, Ramadan period, days to Eid) and daily weather features via automated Open-Meteo API integration, producing 11 ready-to-use external feature columns
- Produced explanatory analysis and business visualizations (year-on-year price growth, coefficient of variation for volatility, Ramadan impact, rainfall correlation with chili and shallot prices) to support decision-making
- Designed an advanced preprocessing plan (feature encoding, lag and rolling features, time-based train/test split) to prevent data leakage ahead of the modeling stage

EDUCATION

Bachelor of Informatics (S1)

Sumbawa University of Technology | Sep 2024 - Jul 2028 (expected) | Sumbawa, Indonesia | **3.83/4.00**
